

Guaranteeing operational management

Should an ancillary service provider (in short: ASP) tender successfully for an offer as per section 2.4 of the framework agreement and not undertake the operational management of the service provision itself, but entrust this instead to a third party, the ASP must transfer the exercise of all the rights and obligations regarding the operational management to this third party.

The signed guarantee of operational management confirms to Swissgrid that the third party is in agreement with the exercising of the corresponding rights and obligations and thereby assumes responsibility for operational management. The ASP remains, however, the sole contract partner and responsible to Swissgrid for all rights and obligations arising from this Framework Agreement.

The tendering ASP transfers operational management of the

Primary control Secondary control Tertiary control

service provision to the ASP undertaking this responsibility.
